Estimating the Economic Boost of Marriage for Same-Sex Couples in Alaska

By Justin M. O’Neill, Christy Mallory, and M.V. Lee Badgett

October 2014

Executive Summary

If marriage is extended to same-sex couples in Alaska, the state would see an economic boost as same-sex couples plan their weddings and as their out-of-state guests purchase goods and services in the state. This study estimates the impact on the state’s economy and on local sales tax revenue.

- We predict that 614 in-state same-sex couples would choose to marry in the three years following an opening of marriage to same-sex couples in Alaska.
- The total spending on wedding arrangements and tourism by resident same-sex couples and their guests would add an estimated $8 million to the state and local economy of Alaska over the course of three years, with a $5.1 million boost in the first year alone.
- This economic boost would add $135,000 in sales tax revenue to local coffers.
- Spending related to same-sex couples’ wedding ceremonies and celebrations would create 26 to 79 jobs in the tourism and recreation sector for the state.

Introduction

As of October 2014, 19 states, the District of Columbia, and the federal government formally recognized marriages between same-sex partners. Additionally, federal district courts in several states have held, or suggested, that withholding state-granted marriages to same-sex couples is unconstitutional in decisions which are on hold pending appeal. In this study, we estimate the impact of weddings of same-sex couples on Alaska’s economy over the next three years if the state were to recognize those marriages.

Our analyses are informed by the methodology that we’ve used in previous studies of the economic impact of marriage for same-sex couples in a number of other states. We utilized state-level data, as well as other relevant data sources, including Census 2010 and the American Community Survey, to estimate the impact of extending marriage to same-sex couples in Alaska.

All of the findings from previous studies suggest that extending marriage rights to same-sex couples produces a positive impact on states’ budgets and economies. Similar conclusions have been reached by legislative offices in Connecticut and Vermont, as well as by the Comptroller General of New York. The Congressional Budget Office has concluded that if all fifty states, in addition to the federal government, extended the rights and obligations of marriage to same-sex couples, the federal government would benefit by nearly $1 billion each year. Throughout this report, we rely on conservative estimates to assess the economic impact of extending the right to marry to same-sex couples. In other words, all assumptions are cautious and, given the range of possibilities, likely produce revenue impacts on the lower bound. Even so, we find that extending marriage to same-sex couples in Alaska will have a positive impact on the state’s economy.

In-State Couples

To determine the potential impact of marriage for same-sex couples in Alaska, we estimate the number of same-sex couples that will marry within the first three years. According to the most recent Census in 2010, there are 1,228 same-sex couples living in Alaska.

We draw upon the experience of other states that have permitted marriage between individuals of the same sex to estimate the number of same-sex couples who might marry in Alaska. In Massachusetts, just over half of same-sex couples married during the initial three-year period. This finding has been confirmed in several other jurisdictions that have more recently allowed same-sex couples to marry. Accordingly, we predict that 50% of Alaska’s 1,228 same-sex couples, or 614
couples, would marry in the first three years (Table 1).  

**Wedding Spending**

If Alaska grants same-sex couples the right to marry, we predict that the state will see a surge in spending on weddings by same-sex resident couples and their out-of-state guests. Our analysis predicts that allowing same-sex couples to marry would generate $8 million through direct wedding spending and wedding-related tourism in the first three years. We estimate that wedding spending generated by marriages of same-sex couples would create 26 to 79 full- and part-time jobs in the first three years.

**Direct Wedding Spending**

Following the legalization of marriage for same-sex couples, Massachusetts experienced a rise in spending associated with wedding planning, such as increased demand for catering services and hotel rooms. More recently, New York, Connecticut, and Washington have also reported a rise in wedding spending after marriage rights were extended to same-sex couples. We expect that Alaska would experience the same economic benefit.

According to The Wedding Report, average spending on weddings in Alaska in 2012 was $33,465. Same-sex couples may receive less financial support from their parents and other family members to cover wedding costs due to persistent stigma, resulting in less spending than their heterosexual counterparts. Taking these factors into account, as in previous studies by the Williams Institute, we estimate here that same-sex couples spend one-quarter of the amount that different-sex couples spend on wedding arrangements. Accordingly, we assume that same-sex couples will spend an average of $8,366 per wedding in Alaska. Using this estimate, we expect resident same-sex couples to generate $5.1 million in direct wedding spending over the introductory three year period.

**Out-of-State Guests**

In 2008, a report based on The Health and Marriage Equality in Massachusetts Survey indicated that in Massachusetts, weddings of same-sex couples included an average of 16 out-of-state guests. We assume that the resident same-sex couples who celebrate their weddings in Alaska will have a similar count of 16 out-of-state guests at their ceremonies.

In order to estimate out-of-state guest spending, we utilize the per diem allowance for food and lodging by state as set forth by the U.S. General Services Administration (GSA). The GSA’s per diem allowance rates are used by federal government agencies to reimburse their employees’ business-related travel expenses. In Alaska (as well as Hawaii and all U.S. Territories and Possessions), the Department of
Defense sets the per diem rates. We determine a state-wide per diem rate by averaging DOD meal and lodging per diems across cities and census-designated places (CDP) and calculating a weighted average by each city or CDP’s population. Additionally in determining daily hotel spending per guest, we assume the guests will share a hotel room. Based on our calculations, we estimate that each guest who travels to Alaska for a wedding will spend, on average, $146 per day on lodging and meals.

We further assume that guests will spend two nights in Alaska when they attend weddings, rather than one, because Alaska is more difficult to travel into and out of than destinations located on the mainland U.S. Thus, we estimate that each guest will spend $292 on lodging and meals for a two day visit to Alaska. In total, we estimate that 9,824 out-of-state guests will spend close to $2.9 million attending weddings of same-sex couples in Alaska during the first three years after legalization (Table 1).

**Job Creation**

In Fiscal Year 2013, Alaska generated over $3.9 billion overall in leisure and recreation spending, which supported 39,000 jobs in Alaska during the year. Based on these figures, we calculated that for every $100,769 in leisure and recreation spending in Alaska, one additional job is created. Taking into account our estimated amount of increased spending, we can deduce that new spending generated by weddings of same-sex couples could create an additional 26 to 79 jobs for Alaska residents.

The number of jobs that could be generated by the total amount of additional spending provides our upper-bound estimate for job creation (79). Sustaining these jobs over time would require the same amount of spending per year. Thus, we assume that one-third of these jobs will likely be sustained for the full three-year period. Based on this assumption, our low-end estimate is that 26 jobs will be sustained over the three-year period.

**Sales Tax Revenue**

Local governments will directly benefit from this increase in spending through local sales taxes. The state itself does not levy a sales tax, but localities set their own rate of sales tax, which is 1.69% on average. The combined wedding-related spending of same-sex couples and their out-of-state guests is estimated to be $8 million, as indicated in Table 1. Using these figures, we estimate that the overall spending boost will generate $135,000 in sales tax revenue in the first three years same-sex couples are permitted to marry.
Impact of Existing Marriages

Currently, the data do not show exactly how many Alaska couples have already married in other jurisdictions. Therefore, we do not exclude these marriages from our analysis. However, we also do not include in our analysis same-sex couples who may travel to Alaska to marry during the next three years. Data from other states show that many couples living in states that do not recognize their marriages travel to other states to marry. For example, the most recent data released from Washington State reveals that out-of-state same-sex couples accounted for 17% of marriages of same-sex couples performed in the first year. A significant number of couples travelled from as far as Texas (170 couples) and California (155 couples). Same-sex couples may be even more likely to marry out of state now than in the past because, as a result of the U.S. Supreme Court’s 2013 decision striking down Section 2 of the Defense of Marriage Act, the federal government now recognizes marriages validly performed in any jurisdiction for purposes of many federal rights and benefits.

Conclusion

In this study, we have drawn on information regarding marriage spending by same-sex couples in other states, along with wedding expenditure and tourism data from the state of Alaska, to estimate the economic boost if the state extends the right to marry to same-sex couples. Our calculations indicate that the total spending on wedding arrangements and tourism by same-sex couples and their guests would be approximately $8 million over three years, with a positive impact of $5.1 million in the first year alone. We estimate that total economic boost over three years would generate over $135,000 in tax revenue for local governments.

It is important to note that also allowing out-of-state same-sex couples the opportunity to wed will likely result in further economic gains for Alaska businesses. This impact would then translate into additional increased tax revenue for local budgets.

Finally, we note that sales taxes only capture the most direct tax effects of increased tourism and wedding expenditures. Businesses and individuals also pay taxes on the new earnings generated by wedding spending, providing a further boost to local budgets.

Endnotes

3 Reports available on the Williams Institute’s web site under Economic Impact Reports, by state.

9 This calculation is based upon collected data revealing that 9,931 same-sex couples married in Massachusetts within the first three years after same-sex couples were allowed to marry. To estimate the total number of same-sex couples residing in Massachusetts in 2004 we utilized American Community Survey data and determined that there were approximately 19,550 resident same-sex couples at that time. This suggests that approximately 51% of couples married over three years.

12 Not all couples who will marry in the first three years will do so within the first year they are permitted. Using data from Massachusetts, we can predict the timing of nuptials over three years; 64% married in the first year, 21% married in the second year, and 15% married in the third year.

The per diem lodging rates are based on Average Daily Rate data from lodging properties that meet the GSA’s criteria. The per diem meal rates are based on data received from restaurants. More information about the GSA’s per diem rates is available at http://www.gsa.gov/portal/content/104208#4.
