Executive Summary

If marriage is extended to same-sex couples in Missouri, the state would see an economic boost as same-sex couples plan their weddings and as their out-of-state guests purchase goods and services in the state. This study estimates the impact on the state’s economy and on state and local sales tax revenue.

- We predict that **5,279 in-state same-sex couples would choose to marry in the three years** following an opening of marriage to same-sex couples in Missouri.
- The total spending on wedding arrangements and tourism by resident same-sex couples and their guests would add an estimated **$36.3 million to the state and local economy** of Missouri over the course of three years, with a **$23.2 million boost in the first year alone**.
- This economic boost would **add $2.75 million in sales tax revenue** to state and local coffers.
- Spending related to same-sex couples’ wedding ceremonies and celebrations would create **312 to 936 jobs** in the tourism and recreation sector for the state.

Introduction
As of June 2014, 19 states, the District of Columbia, and the federal government formally recognized marriages between same-sex partners. Additionally, federal district courts in several states have held, or suggested, that withholding state-granted marriages to same-sex couples is unconstitutional in decisions which are on hold pending appeal. In this study, we estimate the impact of weddings of same-sex couples on Missouri’s economy over the next three years if the state were to recognize those marriages.

Our analyses are informed by the methodology that we’ve used in previous studies of the economic impact of marriage for same-sex couples in a number of other states. We utilized state-level data, as well as other relevant data sources, including Census 2010 and the American Community Survey, to estimate the impact of extending marriage to same-sex couples in Missouri.

All of the findings from previous studies suggest that extending marriage rights to same-sex couples produces a positive impact on states’ budgets and economies. Similar conclusions have been reached by legislative offices in Connecticut and Vermont, as well as by the Comptroller General of New York. The Congressional Budget Office has concluded that if all fifty states, in addition to the federal government, extended the rights and obligations of marriage to same-sex couples, the federal government would benefit by nearly $1 billion each year. Throughout this report, we rely on conservative estimates to assess the economic impact of extending the right to marry to same-sex couples. In other words, all assumptions are cautious and, given the range of possibilities, likely produce revenue impacts on the lower bound. Even so, we find that extending marriage to same-sex couples in Missouri will have a positive impact on the state’s economy.

In-State Couples
To determine the potential impact marriage for same-sex couples in Missouri, we estimate the number of same-sex couples that will marry within the first three years. According to the most recent Census in 2010, there are currently 10,557 same-sex couples living in Missouri. We draw upon the experience of other states that have permitted marriage between individuals of the same sex to estimate the number of same-sex couples who might marry in Missouri. In Massachusetts, just over half of same-sex couples married during the initial three year period. This finding has been confirmed in several other jurisdictions that have more recently allowed same-sex couples to marry. Accordingly, we predict that 50% of Missouri’s
Wedding Spending

If Missouri grants same-sex couples the right to marry, we predict that the state will see a surge in spending on weddings by same-sex resident couples and their out-of-state guests. Our analysis predicts that allowing same-sex couples to marry would generate $36.3 million through direct wedding spending and wedding-related tourism in the first three years. We estimate that wedding spending generated by marriages of same-sex couples would create 311 to 934 full- and part-time jobs in the first three years.

Direct Wedding Spending

Following the legalization of marriage for same-sex couples, Massachusetts experienced a rise in spending associated with wedding planning, such as increased demand for catering services and hotel rooms. More recently, New York, Connecticut, and Washington have also reported a rise in wedding spending after marriage rights were extended to same-sex couples. We expect that Missouri would experience the same economic benefit.

According to The Wedding Report, average spending on weddings in Missouri in 2012 was $20,817. Same-sex couples may receive less financial support from their parents and other family members to cover wedding costs due to persistent stigma, resulting in less spending than their heterosexual counterparts. Taking these factors into account, as in previous studies by the Williams Institute, we estimate here that same-sex couples spend one-quarter of the amount that different-sex couples spend on wedding arrangements. Accordingly, we assume that same-sex couples will spend an average of $5,204 per wedding in Missouri. Using this estimate, we expect resident same-sex couples to generate $27.5 million in direct wedding spending over the introductory three year period.

Out-of-State Guests

In 2008, a report based on The Health and Marriage Equality in Massachusetts Survey indicated that in Massachusetts, weddings of same-sex couples included an average of 16 out-of-state guests. We assume that the resident same-sex couples who celebrate their weddings in Missouri will have a similar count of 16 out-of-state guests at their ceremonies.

In order to estimate out-of-state guest spending, we utilize the per diem allowance for food and lodging by state as set forth by the U.S. General Services Administration (GSA). The GSA’s per diem allowance rates are used by federal government agencies to reimburse their employees’ business-related travel expenses. We determine the overall state per diem, $104, by averaging hotel and food allowance by
county and calculating a weighted average by each county’s population. We assume that each of these guests will spend the average GSA per diem rate for meals for a one day visit. We further assume that guests will share a room and stay for one night.

Based on these studies by the Williams Institute, 84,464 out-of-state guests will spend an estimated $8.8 million attending weddings of same-sex couples in Missouri during the first three years after legalization (Table 1).

**Job Creation**
In Fiscal Year 2013, Missouri generated nearly $11.1 billion overall in tourism spending, which supported 285,114 jobs in Missouri during the year.23 Based on these figures, we calculated that for every $38,802 in leisure and recreation spending in Missouri, one additional job is created. Taking into account our estimated amount of increased spending, we can deduce that new spending generated by weddings of same-sex couples could create an additional 311 to 934 jobs for Missouri residents.

The number of jobs that could be generated by the total amount of additional spending provides our upper-bound estimate for job creation (934). Sustaining these jobs overtime would require the same amount of spending per year. Thus, we assume that one third of these jobs will likely be sustained for the full three-year period. Based on this assumption, our low-end estimate is that 311 jobs will be sustained over the three-year period.

**Sales Tax Revenue**
State and local governments will directly benefit from this increase in spending through the state sales tax and a range of local sales taxes. The state of Missouri imposes an average 7.585% general sales or use tax on consumers.24 The state levies sales tax at a rate of 4.225% and localities set their own rate of additional sales tax, which is 3.36% on average.25 The combined wedding-related spending of same-sex couples and their out-of-state guests is estimated to be $36.3 million, as indicated in Table 1. Using these figures, we estimate that the overall spending boost will generate $2.75 million in sales tax revenue in the first three years same-sex couples are permitted to marry.

**Impact of Existing Marriages**
Currently, the data do not show exactly how many Missouri couples have already married in other jurisdictions. Therefore, we do not exclude these marriages from our analysis. However, we also do not include in our analysis same-sex couples who are likely to travel to Missouri to marry during the next three years. Data from other states show that many couples living in states that do not recognize their
marriages travel to other states to marry. For
example, the most recent data released from
Washington State reveals that out-of-state
same-sex couples accounted for 17% of
marriages of same-sex couples performed in the
first year.26 A significant number of couples
travelled from as far as Texas (170 couples) and
California (155 couples).27 Same-sex couples
may be even more likely to marry out of state
now than in the past because, as a result of the
U.S. Supreme Court’s 2013 decision striking
down Section 2 of the Defense of Marriage Act,
the federal government now recognizes
marriages validly performed in any jurisdiction
for purposes of many federal rights and benefits.28

Missouri is likely to experience a number of
couples traveling from out-of-state to marry.
According to a Missouri tourism report, the five
states that send the most visitors to Missouri
are California, Florida, Texas, New York, and
Pennsylvania.29 Two of these states—Florida
and Texas—do not offer marriage to same-sex
couples. According to Census 2010 data, these
two states have a total of over 94,897 same-sex
couples.30 In addition, many of the states
bordering Missouri (specifically Kentucky,
Tennessee, Arkansas, Oklahoma, Kansas, and
Nebraska) do not currently permit same-sex
marriages either. A sizeable impact may occur if
even a small number of those couples decide to
couple to Missouri to marry. Thus, while we do
not exclude from our analysis an estimate of
Missouri couples who may have already
married in other states, that number is most
likely offset, if not exceeded, by the number of
out-of-state couples who will travel to Missouri
to marry, whom we also exclude.

Conclusion

In this study, we have drawn on information
regarding marriage spending by same-sex
couples in other states, along with wedding
expenditure and tourism data from the state of
Missouri, to estimate the economic boost if the
state extends the right to marry to same-sex
couples. Our calculations indicate that the total
spending on wedding arrangements and
tourism by same-sex couples and their guests
would be approximately $36.3 million over
three years, with a positive impact of $23.2
million in the first year alone. We estimate that
total economic boost over three years would
generate about $2.75 million in tax revenue for
state and local governments.

It is important to note that also allowing out-of-
state same-sex couples the opportunity to wed
will likely result in further economic gains for
Missouri businesses. This impact would then
translate into additional increased tax revenue
for the state and local budgets.

Finally, we note that sales taxes only capture
the most direct tax effects of increased tourism
and wedding expenditures. Businesses and individuals also pay taxes on the new earnings generated by wedding spending, providing a further boost to the state budget.

Endnotes

3 Reports available on the Williams Institute’s web site under Economic Impact Reports, by state.

9 This calculation is based upon collected data revealing that 9,931 same-sex couples married in Massachusetts within the first three years after same-sex couples were allowed to marry. To estimate the total number of same-sex couples residing in Massachusetts in 2004 we utilized American Community Survey data and determined that there were approximately 19,550 resident same-sex couples at that time. This suggests that approximately 51% of couples married over three years.

12 Not all couples who will marry in the first three years will do so within the first year they are permitted. Using data from Massachusetts, we can predict the timing of nuptials over three years; 64% married in the first year, 21% married in the second year, and 15% married in the third year.

The per diem lodging rates are based on Average Daily Rate data from lodging properties that meet the GSA’s criteria. The per diem meal rates are based on data received from restaurants. More information about the GSA’s per diem rates is available at http://www.gsa.gov/portal/content/104208#4.
